

CSE250 DATABASE MANAGEMENT SYSTEM

WINTER SEMESTER 2024

FACULTY : PROF. SHEFALI NAIK

Hospital Information Management System

AU2240016 Bhishmadevsinh Rathod
AU2240025 Shlok Shelat
AU2240023 Dhananjay Kanjariya

Abstract

The Hospital Information Management System we've made is an effort for a comprehensive solution for patient management, covering registration, data storage, appointment scheduling with doctors, and billing processes. Each patient is allocated a distinct identification number, and their comprehensive details are securely stored within the system. Through our software, users can effortlessly ascertain the availability of doctors and conveniently access patient information via their respective IDs. The user interface is thoughtfully designed to prioritize user-friendliness, ensuring seamless navigation for all users.

Registration Module: This module facilitates the seamless registration of patients into the system, ensuring that all necessary information is accurately captured and stored. From basic demographic details to medical history, this module ensures comprehensive data collection.

Patient Information Retrieval Module: Here, users, including medical staff and administrators, can swiftly retrieve patient information using their unique IDs. This module streamlines the process of accessing patient records, ensuring efficient patient care and management.

Billing and Cost Management Module: In this crucial module, billing processes are streamlined, allowing for the efficient management of financial information related to patient services.

Our system offers a range of functionalities aimed at enhancing their healthcare experience. In essence, our Hospital Management System is a comprehensive tool designed to optimize patient care, enhance administrative efficiency, and streamline billing processes, thereby elevating the overall healthcare experience for both patients and healthcare providers.

Thankfulness

We extend our heartfelt gratitude to Dr Bharat Gadhvi, Regional Director, HCG Group of Hospitals, Gujarat and Ahmedabad for their invaluable assistance and support during the development of our project. Their expertise and guidance have been instrumental in shaping our efforts, ensuring that our Hospital Information Management System meets the highest standards of quality and efficiency. Their willingness to share their knowledge and resources has truly been a cornerstone of our success. We are deeply appreciative of the time, insights, and encouragement they have generously provided throughout this journey. Thank you, HCG Ahmedabad, for your unwavering commitment to excellence and for being an invaluable partner in our endeavor to enhance healthcare management.

Description

Problem Statement: In the present speedy world, holding up in lengthy clinic lines is a critical bother. Regularly, this interaction includes manual administration by regulatory staff, where patients get tokens and afterward sit tight for their turn, frequently just to figure out that their ideal specialist is inaccessible because of pass on or failure to take arrangements. Notwithstanding, with the Clinic The executives Framework, these difficulties are actually tended to. Patients currently have the accommodation of booking arrangements from their homes and can undoubtedly look at the accessibility of their favored specialist. Also, patients can advantageously look at their expenses on the web, further smoothing out the cycle. Medical clinic The board Framework's essential goal is to digitize patient and medical clinic data, prompting upgraded regulatory effectiveness and at last, working on understanding consideration, which is the focal point of any medical services foundation.

Functionality: The framework integrates different functionalities, for example, patient enlistment, side effect based sickness determination, solution the board, included under tolerant data and charging age. The charging and patient data recovery process is acquainted with work with the age of patient bills and subtleties. The charging and data cycle will be connected to the patient ID to guarantee exact charging for every patient's administrations.

The charging system will be incorporated with the current functionalities of the Medical clinic The executives Framework, like patient enlistment and conclusion. For example, when a patient registers under the inflow class and goes through ordinary enrollment, the side effects given by the patient will be coordinated with pre-entered side effects in the illness table to decide the related specialization. This specialization will then, at that point, be utilized to distinguish the significant specialist from the specialist table. Likewise, for lab tests and drugs, the framework will bring significant data from the lab test and medication tables in light of the conclusion acquired from the sickness table. The charging table will catch these administrations alongside their separate expenses.

Moreover, patient data by comparative techniques as depicted above in the charging system will give experiences, for example, name, kind of enrollment, lab tests gone through, drugs endorsed, going to specialist, and other important subtleties to give straightforwardness and lucidity to patients with respect to the administrations delivered.

In general, the charging usefulness will upgrade the Clinic The executives Framework by giving a coordinated answer for overseeing patient bills and data precisely and productively, accordingly working on the general patient experience and regulatory work process inside the emergency clinic.

Database Design with ER Diagram

ER Diagram :

https://www.canva.com/design/DAGBtpKfFSc/Zt4WWm3Dq6rOreFLWTBx7g/edit?utm_content=DAGBtpKfFSc&utm_campaign=designshare&utm_medium=link2&utm_source=sharebutton

Database Design:

This outlines the structure and organization of the database tables in the Hospital Management System. It includes the entity-relationship model, table definitions, primary keys, foreign keys, and relationships between tables.

Entity-Relationship Model:

The entity-relationship (ER) model represents the relationships between different entities in the database.

Entities:

- Department
- Medicine
- Lab_Test
- Doctor
- Nurse
- Disease
- Room
- Pre_registration
- Normal_registration
- Emergency_registration
- OPD_registration

Relationships:

- Works In (Between Department and Doctor/Nurse)
- Requires Test (Between Disease and Lab_Test)
- Requires Medicine (Between Disease and Medicine)
- Specializes In (Between Disease and Doctor/Nurse)
- Assigned Room (Between Room and Pre_registration/Normal_registration)

Table Definitions:

1. Department:

- Dp_id (Primary Key)
- Dp_N
- Dp_desp

2. Medicine:

- Medicine_id (Primary Key)
- Medicine_N
- Quantity
- Cost_per_quantity

3. Lab_Test:

- Lab_Test_Id (Primary Key)
- Lab_Test_Name
- Lab_Test_Cost

4. Doctor:

- Doc_Id (Primary Key)
- F_N
- L_N
- Contact_No
- Dp_Id (Foreign Key referencing Department)
- Dp_N (Foreign Key referencing Department)
- Specialization
- Available_Day
- Available_Time

5. Nurse:

- N_Id (Primary Key)
- F_N
- L_N
- Contact_No
- Dp_Id (Foreign Key referencing Department)
- Dp_N (Foreign Key referencing Department)
- Specialization

6. Disease:

- Disease_id (Primary Key)
- Disease_N
- Lab_Test_Id (Foreign Key referencing Lab_Test)
- Medicine_Id (Foreign Key referencing Medicine)
- Symptoms
- Specialization
- Doc_Id (Foreign Key referencing Doctor)
- N_Id (Foreign Key referencing Nurse)

7. Room:

- RoomName (Primary Key)
- No_of_beds
- BedPrice

8. Pre_registration:

- PrePt_Id (Primary Key)
- PreF_Name
- PreM_Name
- PreL_Name
- PreGender
- PreDOB
- PreB_Group
- PreIdentification_M
- Pre_IDCard
- Pre_IDNumber
- PreAddress
- PreMobileNumber
- PreRoom_N (Foreign Key referencing Room)
- PreRef
- PreRefInput
- Presymptoms

9. Normal_registration:

- NormalPt_Id (Primary Key)
- NormalF_Name
- NormalM_Name
- NormalL_Name
- NormalGender
- NormalMarital_Status

- NormalDOB
- NormalB_Group
- NormalIdentification_M
- Normal_IDCard
- Normal_IDCardNumber
- NormalFatherName
- NormalMotherName
- NormalGuardian
- NormalAddress
- NormalMobileNumber
- NormalRoom_N (Foreign Key referencing Room)
- Normalsymptoms

10. Emergency_registration:

- EmergencyPt_Id (Primary Key)
- EmergencyF_Name
- EmergencyM_Name
- EmergencyL_Name
- EmergencyB_Group
- EmergencyMobileNumber
- Emergency_IDCard
- Emergency_IDCardNumber
- EmergencyAccompanyingFName
- EmergencyAccompanyingLName
- EmergencyAccompanyingMobileNumber
- EmergencyAccompanyingGender
- EmergencyAccompanyingIDCard
- EmergencyAccompanyingIDCardNumber
- EmergencyAccompanyingRelation

11. OPD_registration:

- Pt_Id (Primary Key)
- F_Name
- M_Name
- L_Name
- Gender
- DOB
- Mobile_Number
- Specialization

Data Dictionary:

A data dictionary provides detailed information about the data elements in the database, including their names, descriptions, data types, lengths, and other properties.

1. Department:

- Dp_id: Unique identifier for the department. (VARCHAR, 50)
- Dp_N: Name of the department. (VARCHAR, 50)
- Dp_desp: Description of the department. (VARCHAR, 500)

2. Medicine:

- Medicine_id: Unique identifier for the medicine. (VARCHAR, 5)
- Medicine_N: Name of the medicine. (VARCHAR, 100)
- Quantity: Quantity of medicine available. (INTEGER)
- Cost_per_quantity: Cost per quantity of the medicine. (FLOAT)

3. Lab_Test:

- Lab_Test_Id: Unique identifier for the lab test. (VARCHAR, 5)
- Lab_Test_Name: Name of the lab test. (VARCHAR, 100)
- Lab_Test_Cost: Cost of the lab test. (FLOAT)

4. Doctor:

- Doc_Id: Unique identifier for the doctor. (VARCHAR, 100)
- F_N: First name of the doctor. (VARCHAR, 50)
- L_N: Last name of the doctor. (VARCHAR, 50)
- Contact_No: Contact number of the doctor. (VARCHAR, 10)
- Dp_Id: Department ID where the doctor works. (VARCHAR, 100, Foreign Key referencing Department)
- Dp_N: Department name where the doctor works. (VARCHAR, 100, Foreign Key referencing Department)
- Specialization: Area of specialization of the doctor. (VARCHAR, 100)
- Available_Day: Days available for consultation. (VARCHAR, 30)
- Available_Time: Time slots available for consultation. (VARCHAR, 100)

5. Nurse:

- N_Id: Unique identifier for the nurse. (VARCHAR, 100)
- F_N: First name of the nurse. (VARCHAR, 50)
- L_N: Last name of the nurse. (VARCHAR, 50)
- Contact_No: Contact number of the nurse. (VARCHAR, 10)

- Dp_Id: Department ID where the nurse works. (VARCHAR, 100, Foreign Key referencing Department)
- Dp_N: Department name where the nurse works. (VARCHAR, 100, Foreign Key referencing Department)
- Specialization: Area of specialization of the nurse. (VARCHAR, 100)

6. Disease:

- Disease_id: Unique identifier for the disease. (INTEGER)
- Disease_N: Name of the disease. (VARCHAR, 100)
- Lab_Test_Id: ID of the lab test associated with the disease. (VARCHAR, 50, Foreign Key referencing Lab_Test)
- Medicine_Id: ID of the medicine associated with the disease. (VARCHAR, 5, Foreign Key referencing Medicine)
- Symptoms: Symptoms associated with the disease. (VARCHAR, 255)
- Specialization: Specialization related to the disease. (VARCHAR, 100)
- Doc_Id: ID of the doctor specialized in treating the disease. (VARCHAR, 100, Foreign Key referencing Doctor)
- N_Id: ID of the nurse specialized in treating the disease. (VARCHAR, 100, Foreign Key referencing Nurse)

7. Room:

- RoomName: Unique identifier for the room. (VARCHAR, 100)
- No_of_beds: Number of beds in the room. (INTEGER)
- BedPrice: Price per bed in the room. (FLOAT)

8. Pre_registration:

- PrePt_Id: Unique identifier for pre-registration. (INTEGER)
- PreF_Name: First name of the patient. (VARCHAR, 100)
- PreM_Name: Middle name of the patient. (VARCHAR, 100)
- PreL_Name: Last name of the patient. (VARCHAR, 100)
- PreGender: Gender of the patient. (VARCHAR, 10)
- PreDOB: Date of birth of the patient. (DATE)
- PreB_Group: Blood group of the patient. (VARCHAR, 100)
- PreIdentification_M: Method of identification of the patient. (VARCHAR, 100)
- Pre_IDCard: Identification card type of the patient. (VARCHAR, 100)
- Pre_IDNumber: Identification card number of the patient. (VARCHAR, 100)
- PreAddress: Address of the patient. (VARCHAR, 100)
- PreMobileNumber: Mobile number of the patient. (VARCHAR, 10)
- PreRoom_N: Name of the room assigned for pre-registration. (VARCHAR, 100, Foreign Key referencing Room)
- PreRef: Reference information for the patient. (VARCHAR, 100)

- PreRefInput: Reference input for the patient. (VARCHAR, 100)
- Presymptoms: Symptoms reported by the patient. (VARCHAR, 100)

9. Normal_registration:

- NormalPt_Id: Unique identifier for normal registration. (INTEGER)
- NormalF_Name: First name of the patient. (VARCHAR, 100)
- NormalM_Name: Middle name of the patient. (VARCHAR, 100)
- NormalL_Name: Last name of the patient. (VARCHAR, 100)
- NormalGender: Gender of the patient. (VARCHAR, 10)
- NormalMarital_Status: Marital status of the patient. (VARCHAR, 100)
- NormalDOB: Date of birth of the patient. (DATE)
- NormalB_Group: Blood group of the patient. (VARCHAR, 100)
- NormalIdentification_M: Method of identification of the patient. (VARCHAR, 100)
- Normal_IDCard: Identification card type of the patient. (VARCHAR, 100)
- Normal_IDCardNumber: Identification card number of the patient. (VARCHAR, 100)
- NormalFatherName: Father's name of the patient. (VARCHAR, 100)
- NormalMotherName: Mother's name of the patient. (VARCHAR, 100)
- NormalGuardian: Guardian's name of the patient. (VARCHAR, 100)
- NormalAddress: Address of the patient. (VARCHAR, 100)
- NormalMobileNumber: Mobile number of the patient. (VARCHAR, 10)
- NormalRoom_N: Name of the room assigned for normal registration. (VARCHAR, 100, Foreign Key referencing Room)
- Normalsymptoms: Symptoms reported by the patient. (VARCHAR, 100)

10. Emergency_registration:

- EmergencyPt_Id: Unique identifier for emergency registration. (INTEGER)
- EmergencyF_Name: First name of the patient. (VARCHAR, 100)
- EmergencyM_Name: Middle name of the patient. (VARCHAR, 100)
- EmergencyL_Name: Last name of the patient. (VARCHAR, 100)
- EmergencyB_Group: Blood group of the patient. (VARCHAR, 100)
- EmergencyMobileNumber: Mobile number of the patient. (VARCHAR, 10)
- Emergency_IDCard: Identification card type of the patient. (VARCHAR, 100)
- Emergency_IDCardNumber: Identification card number of the patient. (VARCHAR, 100)
- EmergencyAccompanyingFName: First name of the accompanying person. (VARCHAR, 100)
- EmergencyAccompanyingLName: Last name of the accompanying person. (VARCHAR, 100)
- EmergencyAccompanyingMobileNumber: Mobile number of the accompanying person. (VARCHAR, 10)
- EmergencyAccompanyingGender: Gender of the accompanying person. (VARCHAR, 100)
- EmergencyAccompanyingIDCard: Identification card type of the accompanying person. (VARCHAR, 100)

- EmergencyAccompanyingIDCardNumber: Identification card number of the accompanying person. (VARCHAR, 100)
- EmergencyAccompanyingRelation: Relation of the accompanying person to the patient. (VARCHAR, 100)

11. OPD_registration:

- Pt_Id: Unique identifier for OPD registration. (VARCHAR, 100)
- F_Name: First name of the patient. (VARCHAR, 100)
- M_Name: Middle name of the patient. (VARCHAR, 100)
- L_Name: Last name of the patient. (VARCHAR, 100)
- Gender: Gender of the patient. (VARCHAR, 100)
- DOB: Date of birth of the patient. (DATE)
- Mobile_Number: Mobile number of the patient. (VARCHAR, 10)
- Specialization: Specialization of the patient. (VARCHAR, 100)

This data dictionary provides a detailed description of each attribute in the database tables, including their data types and lengths, helping to understand the structure of the Hospital Management System database.

Create and Insert Queries

DEPARTMENT TABLE:

Website:

Registration Options: IP/OPD

OPD Registration

The screenshot shows a web browser window with the URL `localhost/dbMS/opd.html`. The page features a navigation bar with the Medcare logo and links to Home, About, Registration, Patient Information, and Billing. The main content area displays the "OPD Registration Form" with the following fields:

- First Name:
- Middle Name:
- Last Name:
- Gender:
- Date Of Birth:
- Mobile Number:
- Specialization:

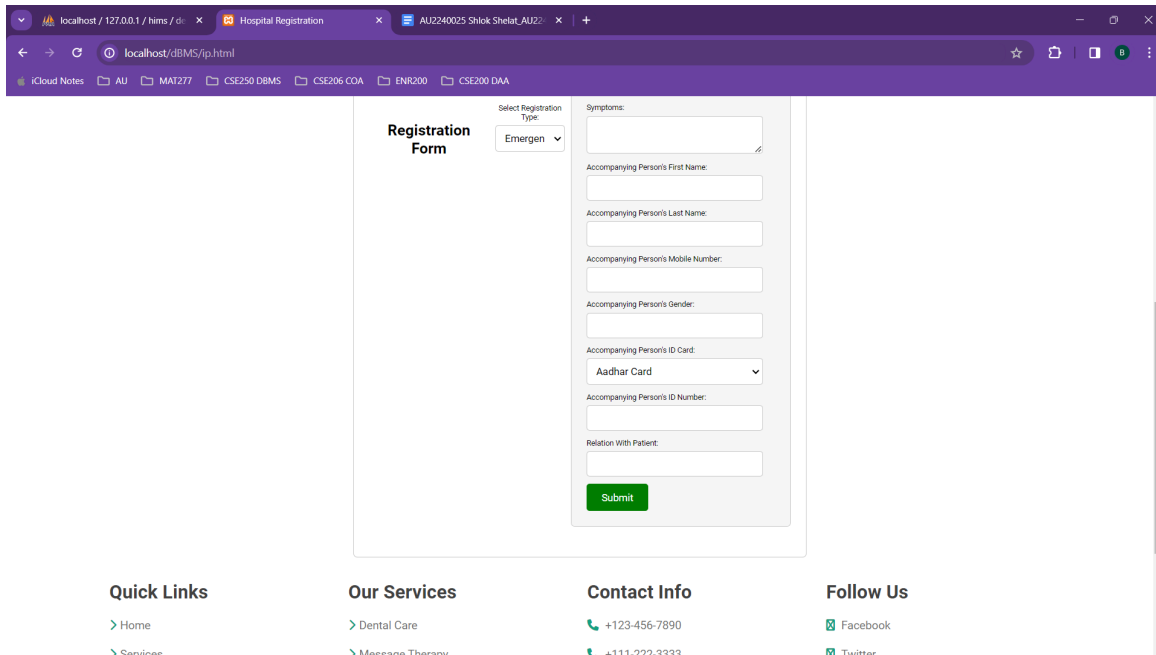

A blue "Submit" button is located at the bottom of the form.

Emergency Registration

The screenshot shows a web browser window with the URL `localhost/dbMS/ip.html`. The page features a navigation bar with the Medcare logo and links to Home, About, Registration, Patient Information, and Billing. The main content area displays the "Emergency Registration Form" with the following fields:

- First Name:
- Middle Name:
- Last Name:
- Blood Group:
- Mobile Number:
- ID Card:
- ID Number:
- Symptoms:
- Accompanying Person's First Name:
- Accompanying Person's Last Name:

A "Select Registration Type" dropdown menu is located to the left of the form, with "Emergen" selected.

Procedures

Search Functionality:

[Video Demo of Search Functionality Procedures](#)

Describing the search Functionality:

The search functionality is used to get information about a particular patient by using their Patient Id. So when you enter the patient Id in the search box you will get all the necessary information related to that patient like the Primary Doctor Treating the patient, Medicines taken by the patient and Lab test taken by the patient. Also In order to segregate the different patients we have assigned the series starting from 1000000 to the Patients with normal Registration, series starting from 2000000 to the Patients with Pre_Registrations, series starting from 3000000 to the Patients with emergency Registration and series starting from 4000000 to the Patients with Opd Registration.

For Normal Registration:

CREATE or replace procedure Normal_Reg(ptid varchar)is

patientid varchar(100):=ptid;

cursor c_patient is select * from Normal_registration;

r_patient c_patient%rowtype;

cursor c_patientdisease_on_symptoms(symptomsmatch varchar) is select * from disease where Symptoms=symptomsmatch;

r_patientdisease_on_symptoms c_patientdisease_on_symptoms%rowtype;

cursor c_medicine(medid varchar) is select * from medicine where Medicine_id=medid;

r_medicine c_medicine%rowtype;

cursor c_lab(lid varchar) is select * from lab_test where Lab_Test_Id=lid;
